REGULATIONS Nº 011/ENERGY/RURA/2026 OF 29/06/2026 GOVERNING ELECTRIC VEHICLES CHARGING INFRASTRUCTURE AND BATTERY SWAPPING STATIONS

The Regulatory Board of Rwanda Utilities Regulatory Authority;

Pursuant to Law Nº 09/2013 of 01/03/2013 establishing the Rwanda Utilities Regulatory Authority and determining its mission, powers, organization and functioning, especially in articles 2 and 20;

Pursuant to Law N°52/2018 of 13/08/2018 Modifying Law Nº21/2011 of 23/06/2011 governing electricity in Rwanda as modified to date, especially in Articles 2;

Considering the increasing adoption of electric mobility in Rwanda and the necessity to establish a regulatory framework governing the development, operation, and provision of electric vehicle charging services and infrastructure;

Based on the recommendations made during the consultative meetings held on 14/05 /2025 and 12/05/2026, between RURA and stakeholders in the electric mobility sub-sector;

After consideration and approval in its meeting of 23/06/2026;

ISSUES THE FOLLOWING REGULATIONS:

CHAPTER ONE: GENERAL PROVISIONS

Article One: Purpose of these Regulations

The purpose of these Regulations is to establish the regulatory framework governing the development, installation, operation, maintenance, and management of Electric Vehicle (EV) charging infrastructure and battery swapping stations, in order to ensure their safety, reliability, efficiency, interoperability, and environmental sustainability.

Article 2: Interpretations

In these regulations:

(a) **"Application**" means a request submitted to the competent authority for the issuance, renewal, modification, transfer, or other approval relating to a licence or permit under these Regulations;

(b) **"Battery Charging and Swapping Station"** means a facility where discharged batteries are recharged and subsequently reused or made available for exchange to electric vehicles or electric motorcycles;

(c) **"Electric Charging Technologies"** refers to the EV charging technologies, including Combined Charging System (CCS) I and II, GB/T, CHAdeMO, NACS (North American Charging Standard), Type 1 / Type 2 AC chargers and others which may be adopted from time to time;

(d) **"Electric Vehicle (EV)"** means any road vehicle, including motorcycles, cars, buses, trucks, or other transport equipment, that is powered fully or partially by electric motors using energy stored in rechargeable batteries or other electrical energy storage systems, and which may be charged through wired charging systems or battery swapping technologies;

(e) **"EV charging infrastructure"** refers to different types of electric vehicle charging facilities, including battery swapping stations;

(f) **"Green Field"** means undeveloped land requiring new civil, electrical, and supporting infrastructure works for the intended development;

(g) **"Grid connection approval"** refers to an official document issued by the electricity distribution licensee confirming that the proposed electric vehicle (EV) charging infrastructure can be safely and reliably connected to the national grid. This approval serves as evidence that the grid has adequate capacity at the connection point and that the project complies with all applicable technical, safety, and operational requirements;

(h) **"Institution in charge of Inspection and Consumer Protection"** refers to Rwanda Inspectorate, Competition and Consumer Protection Authority;

(i) **"Institution in charge of Standards Development"** refers to Rwanda Standards Board;

(j) **Interoperability"** means the technical, operational, and commercial ability of electric vehicle charging systems, battery swapping systems, vehicles, and related infrastructure to function seamlessly across different operators and service providers, enabling users to access services without restriction**;**

(k) "**KW**": a thousand Watts;

(l) "**License**" refers to any document issued by the Regulatory Authority which authorizes the licensee to carry out the activity specified in the license under the conditions prescribed in the license;

(m)"**License applicant**" means any person who files an application for issuance of a license in accordance with these regulations;

(n) "**Licensee**" means any person holding a licence issued by the Regulatory Authority under these Regulations;

(o) **"Non-charging Battery Swapping Stations"** refer to battery swapping stations where batteries are not charged at the station itself. Instead, fully charged batteries are transported to the station from another location and exchanged for depleted batteries;

(p) **“Operator”** means any person or entity licensed or otherwise authorized under these Regulations to install, manage, maintain, or operate electric vehicle charging infrastructure or battery swapping stations, whether for commercial or public service purposes;

(q) **“Person”** means any natural person or legal entity, including a company, partnership, association, or other body of persons, whether incorporated or unincorporated;

(r) **“Public EV Charging Station"** means an electric vehicle charging facility established primarily for the commercial provision of charging services to the general public, and not merely as an ancillary service to another primary business or activity. Such stations are located in publicly accessible areas, including roadsides, transport hubs, parking facilities, and fuel stations, and are designed to serve multiple users and different types of electric vehicles through standardized charging interfaces;

(s) **"Public EV Charging Point on Private Property"** means an electric vehicle charging unit or a limited number of charging units installed on privately owned premises, including shopping malls, hotels, office complexes, or similar facilities, which are accessible to the general public on a commercial or pay-per-use basis, but where the provision of EV charging services is not the principal business activity at the premises or plot of land;

(t) **“Private-use EV charging infrastructure”** means electric vehicle charging or battery swapping infrastructure installed and operated exclusively for non-commercial use by institutions, companies, fleet operators, or individuals for personal or internal use, and not accessible to the general public;

(u) “**Smart charging**” means a charging functionality that enables the monitoring, control, scheduling, modulation, or optimization of electric vehicle charging operations through automated communication and response to grid conditions, electricity demand, energy pricing signals, or instructions from a grid operator or electricity supplier;

(v) “**Regulatory Authority**” means the Rwanda Utilities Regulatory Authority;

(w) **“Road side stations”** refers to large parking facilities established along the roads, particularly national roads, to offer various services and amenities for travellers.

<u>Article 3:</u> Scope of application

These regulations apply to public electric vehicle (EV) charging stations, public and private use of electric vehicles (EV) charging points on private properties, and battery swapping stations in Rwanda.

CHAPTER II: LICENSING REGIME

Section One: Regulatory framework and classification of activities

Article 4: Activities requiring a license

(1) The following activities, when operated on a commercial basis or under a paid service model, shall require a license issued by the Regulatory Authority, prior to commencing operation:

(a) Operation of public electric vehicle (EV) charging stations;
(b) Operation of Public EV charging points on private properties;
(c) Operation of charging battery swapping stations.

(2) The license shall be issued per site, authorizing the license holder to operate electric vehicle charging or battery swapping facilities at that particular site.

Article 5: Activities not requiring a license

(1) The following activities do not require a license:

a) Operation of Private-use EV charging infrastructure;
b) Operation of non-charging battery swapping stations;
c) Operation of home-use EV charging infrastructure.

Any person intending to undertake the activities referred to in paragraph (1) of this Article shall register with the competent authority in accordance with the procedures set out in these Regulations.

Article 6: License categories

The Regulatory Authority shall issue the following categories of licenses:

a) License to operate public EV charging stations;
b) License to operate public EV charging points on private property;
c) License to operate charging battery swap stations.

Article 7: Process of license application

(1) Any person intending to construct or install any category of Electric Vehicle Charging Infrastructure must first obtain a construction permit or non-objection from the City of Kigali or the respective District, in accordance with applicable requirements and procedures as detailed in Article 8 of these Regulations.

(2) Upon completion of construction or installation works, the applicant must obtain an occupation permit issued by the City of Kigali or the relevant District.

(3) Prior to commencement of operations, the applicant shall apply for and obtain the relevant operating licence issued by the Regulatory Authority, in accordance with the licensing procedures set out in these Regulations.

Article 8: Requirements for Construction Permits and Non-Objection for Electric Vehicle Charging Infrastructure

(1) Any person intending to construct or install an Electric Vehicle charging infrastructure on a greenfield, must apply for a construction permit from the City of Kigali or District, in accordance with the applicable requirements and procedures.

(2) Any person intending to install an Electric Vehicle charging infrastructure at an existing building or premises must apply for non-objection from the city of Kigali or respective district.

(3) Applicants for construction permits or non-objection to construct or install Electric Vehicles Charging infrastructure must submit the following documents:

a) Land title, lease agreement or land concession agreement;

b) Trade registration certificate indicating that the operation of EV charging activities is among the authorized business activities;

c) Environmental and Social Impact Assessment, for Electric Vehicles Charging infrastructure to be developed on green fields;

d) A project design describing the proposed technology, site layout in relation to existing buildings, access roads, underground features and other on-site facilities, as well as the electrical installation, office and sanitary facilities. Specifically, for battery swapping stations, the layout shall additionally indicate battery storage arrangements, safety and circulation zones, and the location of fire safety and cooling equipment to ensure safe handling and storage of batteries;

e) Grid connection approval;

f) Equipment type approval or conformity assessment certificate;

g) any other document or information deemed necessary by the City of Kigali or the respective District.

(4) Upon receipt of complete application file, the District or City of Kigali shall review and process the application, and issue a decision based on the applicant's compliance with the minimum technical, safety, security and environmental requirements set out in Annexes 1,2, or 3 of these regulations, as well as any other relevant considerations deemed necessary by the District or City of Kigali.

(5) After completing the installation or construction and prior to applying for an operating license from the Regulatory Authority, the applicant must obtain an occupation permit from the City of Kigali or respective District;

(6) The application processes, required documents, and responsible institutions for permits and licences are set out in Annex IV and Annex V to these Regulations.

Section 2: Licensing of Public EV Charging Stations

Article 9: Permissible locations for public EV charging stations

(1) Public electric vehicle (EV) charging stations may be established at locations that ensure accessibility, safety, and compatibility with existing infrastructure, and shall be subject to the electricity tariff applicable to the category approved by the Regulatory Authority. Such locations may include sites identified by an applicant or sites designated by the competent authority as strategic for the development of the national electric vehicle charging network. Permissible locations include:

(a) Designated areas along roads and public transit corridors;
(b) Existing Petrol Service Stations;
(c) Parking lots;
(d) Transportation hubs including bus terminals, taxi parks and airports' parking;
(e) Tourism sites
(f) Other public gathering areas and Temporary locations such as event venues, exhibitions, or festivals, where mobile or modular EV charging units may be deployed.

(2) All public EV charging stations' installations shall comply with applicable regulatory requirements, including electrical safety standards, fire safety, environmental requirements, and grid connection requirements as prescribed by relevant authorities.

(3) The minimum technical, safety, security and environmental requirements for public charging stations are specified in annex I.

Article 10: Procedure for the application and issuance of the License to Operate Public EV Charging Stations

(1) Applicants for license to operate public EV charging stations shall submit their application files to the Regulatory authority through the established online platform.

(2) Upon reception of the complete application file, the Regulatory Authority shall process the application and issue its decision within the period prescribed in its service charter. The application process is detailed in annex IV of these regulations.

(3) Applicants for licenses to operate public EV charging stations shall submit the following documents:

a) Business registration certificate;
b) Occupational permit from respective District or city of Kigali;
c) Any other document deemed necessary by the Regulatory Authority.

Section 3: Licensing of Public EV Charging Points on Private Properties

Article 11: Permissible locations for installation of public EV charging points at private properties

(1) Public electric vehicle (EV) charging points may be installed on private premises, provided that such locations ensure accessibility, safety, and compatibility with existing infrastructure, and that electricity consumption is billed in accordance with the applicable electricity billing arrangement of the premises. These include, but are not limited to:

a) Shopping malls, supermarkets, and retail centers;
b) Hotels, restaurants, and entertainment venues;
c) Offices and institutional premises;
d) Privately owned parking facilities;
e) Residential complexes.

(2) All EV charging points installations shall comply with applicable regulatory requirements, including electrical safety standards, fire safety, social and environmental requirements, and grid connection conditions as prescribed by relevant authorities.

(3) The minimum technical, safety, security and environmental requirements for EV charging points at private properties are specified in annex II.

Article 12: Procedure for the application and issuance of the License to Operate public EV Charging points at private properties

(1) Applicants for license to operate EV charging points at their private properties shall submit their application files to the Regulatory Authority through the established online platform.

(2) Upon reception of the complete application file, the regulatory authority shall process the application and issue its decision within the period prescribed in its service charter. The application process is detailed in annex IV of these regulations.

(3) Applicants for licenses to install and operate public EV charging points at their private properties shall submit the following documents:

a) Business registration certificate;
b) Occupation permit from respective District or city of Kigali;
c) Any other document deemed necessary by the Regulatory Authority.

Section 4: Licensing of Battery Swapping Stations

Article 13: Permissible locations for installation of EV battery swapping stations

(1) Battery swapping stations, where charging or no charging activities are taking place are allowed at locations that ensure safety, accessibility, and proper handling of battery systems and shall be subject to the electricity tariff applicable to the category approved by the Regulatory Authority.

(2) The minimum technical, safety, security and environmental requirements for installation and operation of Battery swapping stations are specified in annex III.

Article 14: Procedure for the application and issuance of the License to Operate charging battery swapping stations

(1) Applicants for license to operate Charging Battery Swapping Stations shall submit their application files to the Regulatory authority through the established online platform.

(2) Upon reception of the complete application file, the regulatory authority shall process the application and issue its decision within the period prescribed in its service charter. The application process is detailed in annex IV of these regulations.

(3) Applicants for licenses to operate Battery Swapping Stations shall submit the following documents:

a) Business registration certificate;
b) Occupation permit from respective District or city of Kigali;
c) Any other document deemed necessary by the Regulatory Authority.

Section 5: Registration of Home-Use, Private use EV Charging Infrastructures and Non-Charging Battery Swapping Stations

Article 15: Registration of private - use EV charging infrastructures

Any person who intends to install and operate private-use EV charging infrastructure must notify his/her local electricity utility branch before installation to obtain grid connection approval.

Article 16: Registration of non-charging battery swapping stations

Any person who intends to operate a non-charging battery swapping station must register with the Regulatory Authority prior to commencement of activities, through the established online platform.

Article 17: Registration of home-use EV charging infrastructure

(1) Any person who intends to install and/or operate home-use EV charging infrastructure must notify his/her local utility branch before installation to obtain grid connection approval.

(2) Upon obtaining the grid connection approval and prior to commencement of operation, he/she shall register the installed charging infrastructure with the local utility branch.

CHAPTER III: LICENSING CONDITIONS AND LICENSE DURATION

Article 18: Applicable fees

(1) Applicants for any of the licenses issued under these regulations shall not be required to pay application or license fees. However, the Regulatory authority reserves the right to introduce such fees in the future, based on market developments and following consultations with all relevant stakeholders.

(2) All licensees under these regulations must pay regulatory fees as per Regulatory Board Decision determining the contribution levied on annual turnover of the regulated services.

Article 19: License validity

(1) A license issued under these Regulations is valid for a period of five (5) years from the date of issuance and may be renewed in accordance with these Regulations.

(2) A license ceases to be valid where the licensee fails to commence the licensed operations within six (6) months from the date of its issuance, unless otherwise authorized by the Regulatory Authority.

Article 20: License renewal

(1) The License holder must file an application for any license renewal at least one hundred and eighty (180) calendar days prior to the expiration of the current license.

(2) The license renewal is subject to the approval of business viability assessment by the regulatory authority based on audited financial statements, and compliance with applicable safety and security requirements.

(3) The Regulatory Authority shall make its decision on the renewal and notify the applicant of the license renewal decision within timelines set in RURA service charter.

Article 21: License transfer

(1) Modification and transfers of licenses, including the direct or indirect sale, assignment, conveyance, lease or other transfer of assets or activities subject to a license to a different individual or institution shall be subject to a prior written approval of the Regulatory Authority.

(2) The Regulatory Authority may grant such approval upon determining that the proposed transferee satisfies all requirements for the issuance of the relevant license.

(3) Any transfer effected without the prior written approval of the Regulatory Authority constitutes a violation of these Regulations and may result in the suspension or revocation of the license.

CHAPTER IV: INTEROPERABILITY AND TECHNICAL REQUIREMENTS

Article 22: Interoperability of Battery Swapping Systems

(1) Manufacturers, assemblers, distributors, authorized dealers, and other authorized representatives engaged in the production, importation, or sale of electric motorcycles shall ensure that motorcycles are designed, produced, and supplied in a manner that is technically compatible and interoperable with approved battery swapping systems available on the market.

Such interoperability shall enable riders to access and transition between licensed battery swapping operators where an operator ceases operations, fails to meet prescribed service standards, or where the rider elects to switch operators, subject to applicable contractual obligations.

(2) A rider shall only transition upon settlement of all outstanding financial, contractual, and operational obligations with the previous operator.

(3) Existing battery swapping operators, manufacturers, assemblers, distributors, and authorized representatives shall be granted a transitional period of two (2) years from the effective date of these Regulations to establish Research and development capacity, set up Standard Operating Procedures, and achieve full compliance with interoperability requirements as set by the authority in charge of standards.

Article 23: Smart charging and demand management

(1) All public EV charging stations and charging battery swapping stations must be equipped with smart charging capabilities that enable monitoring, control, load management, and communication with the electricity distribution network where applicable.

(2) Charging infrastructure operators must ensure that charging systems have the following capabilities:

a) Load balancing and peak demand management;
b) Remote monitoring and operational control;
c) Demand response functionality where required by the electricity utility or the Regulatory Authority.

(3) The Regulatory Authority may issue technical guidelines governing smart charging protocols, communication interfaces, load management requirements, and grid-responsive charging operations.

(4) Charging infrastructure operators must comply with any directives issued by the Regulatory Authority aimed at safeguarding grid stability, reliability and power quality.

Article 24: Compliance with standards and conformity assessment

(1) All technical operations related to electric mobility and EV charging infrastructure shall comply with applicable standards and requirements established by the institution in charge of standards development. The institution shall be responsible for:

(a) Developing and periodically updating standards for EV charging infrastructure, battery systems, charging connectors, interoperability, electrical safety, and other e-mobility related equipment;

(b) Providing calibration, testing, conformity assessment, type approval, and certification services for locally manufactured and imported e-mobility equipment.

(2) The institution in charge of inspection and consumer protection is responsible for:

(a) Conducting market surveillance, inspections, and enforcement activities to ensure compliance with applicable standards and prevent counterfeit or substandard e-mobility equipment; and

(b) Verifying compliance of imported e-mobility equipment through review of certificates of conformity, type approval certificates, test reports, and related documentation.

CHAPTER V: OPERATIONAL OBLIGATIONS OF LICENSEES

Article 25: License holder responsibilities

A license holder must:

(1) comply with all applicable laws, regulations, technical standards, and directives issued by the Regulatory Authority;

(2) maintain accurate and up-to-date records of sales, operations, and other activities as may be prescribed by the Regulatory Authority;

(3) submit technical, operational, and financial reports to the Regulatory Authority in the form, manner, and frequency prescribed by the Authority;

(4) ensure that charging or battery swapping infrastructure is installed, operated, and maintained in accordance with applicable technical standards and best industry practices;

(5) Seek and obtain approval of the Regulatory Authority prior the transfer of the license to a third party;

(6) notify the Regulatory Authority prior to any change in location of charging or battery swapping infrastructure, and obtain prior approval where such change is material or affects service coverage, safety, or compliance requirements;

(7) obtain prior approval from the relevant electricity service provider before undertaking any expansion or modification of charging infrastructure that affects electricity load, capacity, or grid connection requirements;

(8) Report any incident affecting service delivery to the Regulatory Authority within one (1) hour from the occurrence of the incident as an initial or flash report. Where the incident results in service interruption or downtime exceeding one (1) hour, or where otherwise required by the Regulatory Authority, the licensee shall submit a detailed incident report within forty-eight (48) hours, indicating the cause of the incident, its impact on operations, corrective actions undertaken, and mitigation measures implemented to minimize recurrence and service disruption;

(9) Comply with all instructions, directives, and enforcement measures issued by the Regulatory Authority and other competent authorities.

Article 26: Quality of service

Any Licensee must ensure that:

(a) A minimum charger uptime of 97% is maintained around the clock;

(b) Maximum repair time does not exceed 24 hours;

(c) Any defective battery is replaced as soon as it is handed over;

(d) No defective battery is released into the supply chain;

(e) Spare parts for replacement are always available;

(f) manage, store, transport, and dispose of defective batteries and related e-waste in accordance with applicable environmental laws, regulations, and approved hazardous waste management standards;

(g) resolve customer complaints within twenty-four (24) hours of receipt, except where the complaint requires technical investigation, in which case the customer shall be informed of the status and expected resolution timeline;

(h) the maximum waiting time for service at any battery swapping station does not exceed twenty (20) minutes.

Article 27: Tariff Management and Consumer Protection

(1) Tariffs for EV charging and battery swapping services must be fair, transparent, non-discriminatory and reflective of market conditions and operational costs.

(2) License holders shall clearly display applicable tariffs, fees, charging conditions, and payment terms at all charging and battery swapping facilities.

(3) The Regulatory Authority monitors pricing practices in the EV charging and battery swapping sector to promote fair competition and protect consumers against excessive or anti-competitive pricing practices.

(4) Where the Regulatory Authority determines that pricing practices are unfair, excessive, discriminatory, or harmful to consumers or market development, it may issue directives or take appropriate regulatory measures in accordance with applicable laws and regulations.

(5) License holders must provide accurate billing information and transaction records to customers and establish mechanisms for handling billing disputes and customer complaints.

(6) The Regulatory Authority may issue additional guidelines on tariff transparency, pricing disclosure, consumer protection, and billing practices applicable to EV charging and battery swapping services.

Article 28: Complaints handling and dispute resolution

(1) License holders must establish and maintain accessible, transparent, and effective mechanisms for receiving, recording, processing, and resolving complaints related to EV charging or battery swapping services.

(2) License holders shall inform users and affected parties of the available complaint handling channels and procedures, including contact details and timelines for resolution.

(3) Any complaint not resolved at the level of the license holder may be escalated to the Regulatory Authority for handling in accordance with the applicable complaints handling and dispute resolution mechanisms established by the Regulatory Authority.

(4) License holders shall maintain accurate and up-to-date records of all complaints received, including their nature, handling process, resolution status, and corrective actions taken, and shall submit such records to the Regulatory Authority upon request or at intervals prescribed by the Authority.

CHAPTERVI: MONITORING AND ENFORCEMENT POWERS

Article 29: License enforcement actions

(1) Where the Regulatory Authority determines that a licensee has failed to comply with any term or condition of the license, these Regulations, or any applicable law, it may initiate an enforcement proceeding.

(2) Such proceeding may result in one or more of the following measures:

(a) issuance of a warning notice or enforcement notice;
(b) monetary sanctions or administrative penalties;
(c) imposition of additional license conditions;
(d) suspension of the license; or
(e) revocation of the license.

Article 30: Compliance monitoring of licensees

(1) The Regulatory Authority shall monitor the performance of each licensee to ensure full compliance with the terms and conditions of its license, these Regulations, and any applicable laws and standards.

(2) The Regulatory Authority shall include terms and conditions in the license requiring licensees to report on financial, technical, organizational and other data needed to allow the Regulatory Authority to effectively monitor license compliance to ensure progress toward a competitive marketplace and to ensure accurate tariff setting.

(3) The Regulatory Authority may also perform physical inspections of the license holder's facilities and corporate records on license holder's premises. These inspections may be conducted on an announced and unannounced basis. The inspections and audits shall be conducted during normal business hours, except when the Regulatory Authority has a reasonable basis to believe that non-compliant activities are occurring outside of normal business hours.

(4) The Regulatory Authority shall monitor licensee compliance with waste management and all decommissioning terms and conditions of the license even after expiration of the license term in order to ensure full compliance with those terms and conditions and to ensure that the land is returned to its original condition.

Article 31: License Suspension

(1) The Regulatory Authority may suspend a license in the exercise of its regulatory functions where it determines that the holder has committed a serious breach of these Regulations, the terms and conditions of the permit, authorization, or license, or any applicable law.

(2) Without prejudice to Paragraph (1) of this Article, the Regulatory Authority may suspend a license where it determines that:

(a) the holder has failed to comply with an enforcement notice issued by the Regulatory Authority;

(b) the holder has engaged in serious misconduct that distorts or is likely to distort fair competition, or adversely affects consumer interests;

(c) the holder has engaged in serious misconduct that jeopardizes public interest, public safety, public health, or environmental protection;

(d) the holder repeatedly fails to submit monitoring, reporting, or other information required by the Regulatory Authority;

(e) the holder repeatedly fails to cooperate with inspections, audits, investigations, or other regulatory activities conducted by the Regulatory Authority;

(f) the holder repeatedly fails, within the same financial year, to pay regulatory fees or any other charges required under applicable laws;

(g) any other ground that may be provided for in the relevant laws and regulations.

(3) Before suspending a license, the Regulatory Authority shall notify the holder in writing of the grounds for the intended suspension and provide an opportunity to be heard, except where immediate suspension is necessary to protect public safety, public health, the environment, or other overriding public interests.

Article 32: License revocation

(1) The Regulatory Authority may revoke a license where it determines that the holder has committed a serious or persistent breach of these Regulations, the terms and conditions of the permit, authorization, or license, or any applicable law.

(2) Without prejudice to Paragraph (1) of this Article, the Regulatory Authority may revoke a permit, authorization, or license where it determines that:

(a) the holder has failed to comply with a suspension order issued by the Regulatory Authority;

(b) the holder has engaged in activities that compromise or threaten national security;

(c) the holder has provided false, misleading, or inaccurate information that materially influenced the Regulatory Authority's decision to grant the license;

(d) the holder has abandoned the activities for which the license was granted;

(e) the holder has been declared bankrupt, insolvent, or subject to liquidation by a competent court; or

(f) any other ground provided for under applicable laws and regulations.

(3) Before revoking a license, the Regulatory Authority notifies the holder in writing of the grounds for the proposed revocation and provide the holder with an opportunity to be heard, except where immediate revocation is required by law or is necessary to protect, public safety, national security or other overriding public interests.

Article 33: License suspension and revocation proceedings

(1) A suspension or revocation proceedings shall be conducted as follows:

(a) The Regulatory Authority shall initiate a suspension or revocation proceeding by issuing a written notice to the licensee informing it of the commencement of the proceeding and requiring the licensee to submit a written response within a prescribed period;

(b) Where the licensee contests the proposed suspension or revocation, or fails to submit a response within the prescribed period, the Regulatory Authority shall conduct a hearing prior to making a determination;

(c) Where, during the course of the proceeding, the licensee remedies the violation that gave rise to the proceeding, the Regulatory Authority may, at its discretion, terminate the proceeding.

(2) The Regulatory Authority may, where appropriate, convert the proceeding into an enforcement action, or proceeding for modification or transfer of the license, in accordance with these Regulations.

Article 34: License surrender

(1) The surrender of a license is subject to the Regulatory Authority approval.

(2) A licensee intending to surrender its license shall notify the Regulatory Authority in writing at least one hundred and eighty (180) days prior to the intended date of cessation of activities. The notification shall state:

(a) the reasons for the proposed surrender;

(b) the proposed timeline for orderly cessation of licensed activities; and

(c) a detailed transition plan demonstrating how service continuity and consumer interests will be protected, including the settlement of customer credits, subscriptions, and other outstanding obligations.

(3) A licensee surrendering its license shall remain responsible for:

(a) the settlement of all outstanding debts, liabilities, and regulatory fees; and

(b) the proper handover of all operational, technical, and regulatory records to the Regulatory Authority or any other entity designated by the Regulatory Authority.

Article 35: Administrative review and appeals relating to regulatory decisions

(1) Any licensee, operator, or applicant who is dissatisfied with a decision relating to licensing or regulatory matters may submit a request for reconsideration to the Director General.

(2) Where a party remains dissatisfied after reconsideration by the Director General, the party may appeal to the Regulatory Board of the Regulatory Authority.

(3) The decision of the Regulatory Board is final within the administrative structure of the Regulatory Authority, without prejudice to the right of judicial review before a competent court in accordance with applicable laws.

(4) Any licensee who fails to comply with approved surrender conditions shall be subject to a post-surrender review by the Regulatory Authority and may face penalties or legal action if they do not comply with the requirements or resolve customer complaints.

Article 36: Faults and administrative sanctions

(1) Any person who operates an electric vehicle charging station or a charging battery swapping station without holding the relevant licence prescribed under these Regulations commits a fault and is liable to an administrative fine of one million Rwanda Francs (FRW 1,000,000), without prejudice to any enforcement action that may be taken by the Regulatory Authority under these Regulations.

(2) Any licensee who fails to comply with technical, safety, and security requirements is liable to an administrative fine provided in the ministerial order determining urban planning and building regulations, and other applicable laws, regulations and orders.

(3) Any licensee who extends the size or capacity of a charging or battery swapping facility without prior approval of the Regulatory Authority is liable to an administrative fine of one million Rwanda Francs (FRW 1,000,000).

(4) Any licensee who relocates a charging station or battery swapping station without obtaining the prior approval from the Regulatory Authority and, where applicable, the required licence modification or licence renewal, is liable to an administrative fine of one million Rwanda Francs (FRW 1,000,000), without prejudice to any corrective measures or enforcement action that may be imposed by the Regulatory Authority.

(5) Any licensee intending to cease operations must notify the Regulatory Authority at least six (6) months prior to cessation. Failure to provide such notice attracts an administrative fine of one million Rwanda Francs (FRW 1,000,000), without prejudice to obligations relating to orderly exit under these Regulations.

(6) Any person who converts a non-commercial or free charging station into a commercial charging station without obtaining the required licence commits an offence and is liable to an administrative fine of one million Rwanda Francs (FRW 1,000,000), without prejudice to any corrective measures or enforcement action that may be imposed by the Regulatory Authority.

(7) The imposition of an administrative fine under this article does not preclude the Regulatory Authority from imposing any other enforcement measure provided for under these Regulations, including the issuance of enforcement notices, licence suspension, or licence revocation.

CHAPTER VII: TRANSITIONAL AND FINAL PROVISIONS

Article 37: Transitional period

Any person or entity engaged in the operation of electric vehicle charging infrastructure or battery swapping stations prior to the entry into force of these Regulations must comply with these Regulations within a period not exceeding twelve (12) months from the effective date of these Regulations.

Article 38: Repealing provision

All prior provisions contrary to these regulations are hereby repealed.

Article 39: Entry into force

These regulations come into force on the date of their signature by the Chairperson of the Regulatory Board

Kigali, on 29/6/2026

(sé)

Dr Carpophore NTAGUNGIRA
Chairperson of the Regulatory Board

ANNEX I: MINIMUM TECHNICAL, SAFETY, SECURITY AND ENVIRONMENTAL REQUIREMENTS FOR PUBLIC CHARGING STATIONS

Category	Requirement	Details
Property & Land Use	**Zoning Compliance**	Public charging stations must comply with the **EV charging infrastructure master plan** and be located in **designated zones (residential, commercial, industrial, transportation, mixed-use, petrol stations and roadside stations)**.
	Space Availability	• Parking slot size **(2.5 m * 5 m)** space for amenities, excluding space for manoeuvring. • EV charging facilities located at petrol service stations should comply with the guidelines on Right of way for power lines.
	Pavement & Accessibility	Charging station spaces must be **paved** and include accessible amenities (offices, grab-and-go retail area, and lavatories for men, women, and people with disabilities).
Electrical & Infrastructure	**Power Supply Compatibility**	The equipment/system must support **15kV or 30kV medium voltage levels** within ± 10%, **400V-3 phase/230V-1 phase low voltage levels** within ± 10%, and a normal frequency of **50Hz** within ± 1%, in accordance with the Rwanda Grid Code.
	Power Factor Compliance	EV charging infrastructure shall maintain a power factor of not less than **0.9** at the point of connection under normal operating conditions. Where necessary, appropriate power factor correction measures or equipment shall be installed to minimize reactive power consumption and maintain grid stability.
	Total Harmonic Distortion (THD)	Must be **less than 3%** to ensure power quality and grid stability.
	Charging Technologies	• Public EV charging stations shall include at least one DC fast charging system with a minimum rated output of 50 kW per charging gun. • The DC fast charging system may consist of multiple charging outlets connected to a shared power cabinet, provided that it: - delivers sufficient total capacity for simultaneous operation; and

		- incorporates dynamic load management when multiple vehicles are charging concurrently. • Public Charging infrastructure shall support at least two most prevalent charging technologies in the country. • All technical specifications, including connectors, communication protocols, and interoperability requirements, shall be in accordance with standards adopted by Rwanda Standards Board.
	Utility Approval	Local electricity distributor must **approve the grid connection.**
Technical & Safety Compliance	**Electrical Safety & Protection**	Must include **earthing, grounding, shock current protection, overcurrent protection, lightning, and surge protection**. Earthing/grounding resistance should be less than 5 ohms.
	Fire Safety & Emergency Protocols	Charging stations must be equipped with **fire safety equipment**, **emergency shutoff systems**, and **ventilation for indoor setups**.
	First Aid & Security Measures	Station operators must be provided with **first aid kits, safety signages, emergency response plans**, and **security measures**.
	Personal Protective Equipment (PPE)	Staff must be trained in **Occupational Health & Safety (OHS)** and provided with PPE.
Environmental & Social Requirements	**Environmental & Social Management Plan**	A plan must be in place to manage **environmental and social impacts** of the station.
	Waste Management Plan	A plan for **proper disposal and recycling of chargers, batteries, and electronic waste** must be in place.
Metering & Performance	**EVSE Metrological Compliance**	Energy measurement and billing systems must use minimum **class 1 (≤ ±1% error)** meters and comply with legal metrology laws. Meters must be certified, tamper-proof, and recalibrated periodically at least **every five (5) years**.

ANNEX II: MINIMUM TECHNICAL, SAFETY, SECURITY AND ENVIRONMENTAL REQUIREMENTS FOR EV CHARGING POINTS ON COMMERCIAL PRIVATE PROPERTIES

Category	Requirement	Details
Property & Land Use	**Zoning Compliance**	Property must be zoned for **(residential, commercial, industrial, and mixed-use)** as per CoK /District master plan.
	Space Availability	Public charging points must be in designated parking areas with sufficient space to prevent congestion and operational disruptions.
Electrical & Infrastructure	**Power Supply Capacity**	The equipment/system must support 15kV or 30kV medium voltage levels within ± 10%, 400V-3 phase/230V-1 phase low voltage levels within ± 10%, and a normal frequency of 50Hz within ± 1%, per the Rwanda Grid Code.
	Power Factor Compliance	EV charging infrastructure shall maintain a power factor of not less than **0.9** at the point of connection under normal operating conditions. Where necessary, appropriate power factor correction measures or equipment shall be installed to minimize reactive power consumption and maintain grid stability.
	Total Harmonic Distortion (THD)	Must be **less than 3%** to ensure power quality and grid stability.
	Utility Approval	Local electricity distributor must approve grid connection before installation.
Technical & Safety Compliance	**Fire Safety & Emergency Protocols**	Charging stations must be equipped with **fire safety equipment, emergency shutoff systems,** and **ventilation for indoor setup**s.

	Electrical Safety & Protection	Must include **earthing, grounding, shock current protection, overcurrent protection, lightning, and surge protection**. Earthing/grounding resistance should be less than 5 ohms
Environmental & Sustainability	**Environmental & Social Management Plan**	A plan must be in place to manage **environmental and social impacts** of the station.
	Waste Management Plan	A plan for **proper disposal and recycling of chargers, batteries, and electronic waste** must be in place.
Metering & Performance	**EVSE Metrological Compliance**	Energy measurement and billing systems must use minimum **class 1 (≤±1% error)** meters and comply with legal metrology laws. Meters must be certified, tamper-proof, and recalibrated periodically at least **every five (5) years**.

ANNEX III: MINIMUM TECHNICAL, SAFETY, SECURITY AND ENVIRONMENTAL REQUIREMENTS FOR INSTALLATION AND OPERATION OF BATTERY SWAPPING STATIONS (Both charging and non-charging battery swapping stations)

Category	Requirement	Details
Land & Location	**Zoning Compliance**	Battery swap stations shall be located in commercial, transportation, light industries and mixed-use zones as per CoK /District master plan.
	Accessibility	Must be easily accessible to EV users, ideally near roads.
	Distance from Road	Battery swapping stations located near the roads/streets must respect the roads/streets setbacks as per national building code.
	Parking	Must have enough parking space for swapping **(at least for 5 motorcycles** swapping at the same time)
	Inter-swapping bays distance	Where swapping bays are laid out in a parallel configuration, the inter-bays clearance should be at least **1.2 meters,** to allow easy circulation.
Electrical & Infrastructure	**Power Supply Capacity**	The equipment/system must support 15kV or 30kV medium voltage levels within ± 10%, 400V-3 phase/230V-1 phase low voltage levels within ± 10%, and a normal frequency of 50Hz within ± 1%, per the Rwanda Grid Code.
	Power Factor Compliance	EV charging infrastructure shall maintain a power factor of not less than **0.9** at the point of connection under normal operating conditions. Where necessary, appropriate power factor correction measures or equipment shall be installed to minimize reactive power consumption and maintain grid stability.
	Total Harmonic Distortion (THD)	Must be **less than 3%** to ensure power quality and grid stability. The EV charging infrastructure shall ensure that harmonic current injection complies with applicable standards, and shall install mitigation equipment where necessary.
	Utility Approval	Local electricity distributor must **approve the grid connection** and assess the **grid impact,** where applicable.

Technical & Safety Compliance	**Electrical Safety & Protection**	Must include **earthing, grounding, shock current protection, overcurrent protection, lightning, and surge protection**. Earthing/grounding resistance should be less than 5 ohms
	Fire Safety & Emergency Protocols	• Battery swapping stations must be equipped with **fire safety equipment**, **emergency shutoff systems**, and **Air-conditioning & ventilation for indoor setups**. • For Battery Swapping Stations located at petrol service stations, chargers should be installed in clearly separated **(minimum 10 meters from tank farm, fuel dispensers, vent pipes and off-loading point),** ventilated zones. Their covers should be fireproof.
	First Aid & Security Measures	Battery swapping stations must have **first aid kits, safety signages, emergency response plans**, and **security measures**.
	Personal Protective Equipment (PPE)	Staff must be trained in **Occupational Health & Safety (OHS)** and provided with PPE.
	Waste Management Plan	A plan for **proper disposal and recycling of chargers, batteries, and electronic waste** must be in place.

ANNEX IV: LICENSE APPLICATION PROCESS

ANNEX V: REQUIRED ADMINISTRATIVE DOCUMENTS, PERMITTING & LICENSING INSTITUTIONS

License / Permit	Issuing Institution	Required documents
Construction permit / non-objection	CoK / District	a) Land title, lease agreement or land concession agreement; b) Trade Registration Certificate issued by RDB; c) Environmental and Social Impact Assessment issued by RDB; d) A project design report prepared by the applicant; e) Grid connection approval issued by REG/EUCL; f) Equipment type approval or conformity assessment certificate issued by RSB; g) Any other document/information deemed necessary by CoK or respective district.
Occupation permit	CoK / District	a) Completed checklist developed by CoK / District; b) Any other document/information deemed necessary by CoK or respective district.
Operation License	RURA	a) Occupation permit issued by CoK / District; b) Trade Registration Certificate issued by RDB; c) Any other document/information deemed necessary by RURA.

Seen to be annexed to Regulations Nº 011/ENERGY/RURA/2026 of 23/ JUNE/ 2026 governing electric vehicles charging infrastructure and swapping stations

Kigali 29/06/2026
